

## How to use this passport:

Photocopy the pages back to back and cut down the middle and fold to make a booklet, the pages should fall in order. You only need half the amount of the last two pages, I just couldn't make it neatly fit onto 4 pages.

The cover page has a colour version and a black and white, your choice.

The page with only lines on it is for the 100 day picture, examples are posted on the wiki. I punched out 100 out of construction paper using a round punch and hole punch and cut black strips for the 1, you could also use number stickers.

The page with the blank 100 board is to print the date of 100 day and then a simple bingo game. Put the following numbers in a bag (see below), have students draw and call out that number, colour the corresponding box, in the end the hidden picture that appears is the number 100.

22, 24, 25, 26, 28, 29, 30, 32	34, 36, 38, 40, 42, 44, 46, 48
50, 52, 54, 56, 58, 60, 62, 64	66, 68, 70, 72, 74, 75, 76, 78, 79, 80

Each time we finish a challenge we glue in \$100. We begin several days before 100 day.

Our list of 100 words includes sight words we have been working on since the beginning of the school year and our words from our jasettes reading program.

Students can also include their own words. This is a great pre-assessment for 2nd term report cards. We read to each other over the course of a few days in groups of 3. Even if students read with support that's fine, the goal is to have a goal and meet it! I send this home too for parents to sign and return.

The 100 math problems is about strategy. The problems are simple, I am teaching my students strategies to find the answers they know, count on, count back, how much is zero and the doubles. Some breeze through these, other's we work together using manipulatives, again over a few days.

I think there are only 96 problems, the dot to dot counts as one, the finger problem in the book and measuring, we make up a few of our own as well.
